

# AIRBUL Local single Cabinet

**The AIRBUL LOCAL SINGLE CABINET is a convenient way of displaying a single tank level on a small cabinet. It is fitted with a high quality double scale manometer which is protected against overpressure.**

This marine cabinet includes one AIRBUL MODULATOR assembly. It is a fully pneumatic system. A purge button is directly accessible on the front panel.

The single air pipe coming from the AIRBUL PURGE HEAD assembly enters the cabinet through the bottom plate of the system.

This unit may be used when a single separate display is required. In such a case, the air valve, regulator and filters have to be mounted in a different location and may be used for other LOCAL SINGLE units.
